

Year 3 Videos

You have already learnt...

In Year 2, you worked on taking photographs on the ipad and giving them captions. You thought carefully about how to centre your pictures in frame and what they could be used for. You practised using the microphone on the ipad and speaking clearly at an appropriate distance.

Photo Editing

You can change the appearance of an image to **highlight something in it** or to **suggest a mood/feeling** (e.g. coldness, magical, happiness).

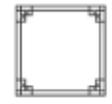

Crop lets you cut out parts you don't want.

Apply **filters** or effects to change the colours.

Remove **blemishes** like dust or dirt.

Add a **border** or frame so it looks neat.

Adjust the **brightness** and **contrast** so it is lighter or darker.

Blur parts so your eyes focus on the main subject.

Key Knowledge

You can edit several video clips together using video editing software, like Splice. This is what you might see when people make videos online. Cropping is when you cut parts out of videos that you do not want to include in your final plan. You can change your videos with effects to make it look brighter and more colourful. You can add frames to it and add separate pictures and details.

Key Skills

- Learn how to take images and videos to enhance work
- Create media using Splice

Video Editing

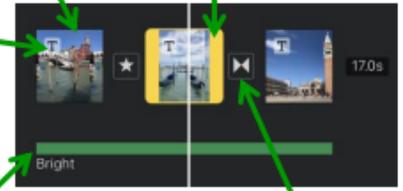

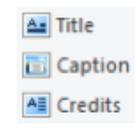

Plan a **storyboard** of your movie first so you know what media to collect and capture for it.

Insert and arrange videos on a **timeline**.

Trim and adjust their duration.

Type on **text**.

Add a **soundtrack** to suggest a tone (e.g. upbeat, scary).

Put **transitions** between clips.

Record a **voiceover** narration.

Apply **pan** and **zoom** effects to create motion and highlight things.

Next you will learn...

You will work on PowerPoint in Year 5 and learn to add audio to your slides.
