# Year 3 Powerpoint

You have already learnt…

In Year 2, you started using the Scratch interface and looking at which categories of blocks you would need for different actions. You used the pen to make your sprite move around and follow instructions to draw lines and shapes. You used different sprites and backdrops.

Presentation Features
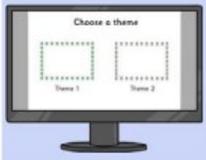

theme	slide	title
image	video	audio
shape	animation	transition
hyperlink	text	colour

Key Knowledge

-A poster will have more impact if it is visually appealing and includes pictures, photographs and different colours and fonts

-You can change the font of your writing using the Font box. You can also change the colour and style

-Slide transitions add a different effect when you move between slides

-Slide animations will mean your text and images have a different visual effect.

Key Skills

• Use Microsoft word to create a poster

• Use Powerpoint to write a presentation using relevant information

Key Vocabulary

animation	A visual effect that can be applied to the text or pictures included on a slide.
format	The layout of the design, text or pictures on a slide. You can also format the font, size, colour and style of text.
hyperlink	Text, images, buttons or moving images that can be used to move from document to document. They can even move from one place to another in the same document.
multimedia	Using more than one form of communication, such as text, graphics, animation and audio.
slide	A single page or image shown in a multimedia slideshow presentation.
slideshow	A collection of pages that can include different multimedia.
theme	A slide design that includes pre-existing colours, fonts and special effects, such as animations and transitions.
transition	A visual effect that happens between each slide.

Next you will learn…

You will work on PowerPoint in Year 5 and learn to add audio to your slides.

What Is Presentation Software?

Presentation software is a type of computer program or app that is used to create slideshows to accompany a speech or presentation. Here are some examples of presentation software:
